ZÉLL-V Platinum Sheep Placenta Extract is a form of cellular therapy. It aims to meet human race’s need for anti-ageing and the prolongation of life through the use of the most advanced cell extraction method. ZÉLL-V works in accordance to the biological principle of “self-healing”, whereby our own cells are activated for self-repair and regeneration to achieve optimum function of our bodily systems. Unlike drugs, it does not contain any chemicals, and is without any known side effects.

Since time immemorial, human beings have gone to great lengths to search for the elixir of youth - the remedy that would keep us healthy, strong, young and beautiful always. Today, it seems that the search has finally come to an end, thanks to cellular therapy.

Ageing, therefore, is also known as cellular degradation. Various adverse factors in modern life, such as poor diet, stress, anxiety, alcohol consumption, drug intake, smoking and environmental pollution can damage our cells and accelerate cellular degradation, causing the function of our tissue and organs to decline. Various signs of ageing are the appearance of wrinkles and dark spots, poor memory, insomnia, weakened immune system, greying and loss of hair, lethargy, fatigue and so on.
